(54) Title: SHAVER, SHAVING HEAD AND METHOD OF CLEANING A HAIR CHAMBER OF A SHAVER

(57) Abstract: A shaver comprises a shaving head (4; 104) with a screen (6) having an internal surface (7), an external surface for contacting a skin to be shaved, and hair-receiving openings (8, 9), and a cutter (3) having at least one cutting edge (5) movable along the internal surface (7) of the screen (6) by means of a drive structure (44; 125) that includes a motor. The cutting edge (5) cooperates with the screen (6) for cutting off hairs projecting through the hair-receiving openings. Behind the hair-receiving openings (8, 9) a hair chamber (13; 113; 213; 313) is located. The shaver is equipped with one or more liquid displacement impellers (15; 115; 215; 315) for displacing liquid through the hair chamber (13; 113; 213; 313). The impellers (15; 115; 215; 315) are each connected to the drive structure (44; 125) for driving the movement of the impeller (15; 115; 215; 315) for cleaning the hair chamber (13; 113; 213; 313).
